LYNQ

Data Sheet
Industrial Drivers

A driver is a software component that enables LYNQ to meet the connectivity requirements of a specific device, system, or other data source. The driver handles all proprietary communications to the data source for LYNQ; the client interfaces handle all supported OPC, proprietary, and open standards connectivity to applications that monitor or control the devices. Drivers may be licensed individually or in suites. Additional drivers can be licensed on demand as connectivity needs evolve. For a list of available drivers, please see below.
