CANADA'S LARGEST MANUFACTURER AND DISTRIBUTOR OF VARIOUS PLUMBING PARTS ACHIEVED HIGH END AUTOMATED AND CUSTOMISED BUSINESS PROCESSES WHICH SIGNIFICANTLY REDUCED ERRORS THROUGH LYNQ AND SYSPRO.

OS&B is a leading manufacturer of bathtub overflows, drains, fittings and other plumbing parts. Established in 1975, OS&B manufactures for and supplies to plumbing wholesalers and some of the largest OEM brands in the world. They offer in-house product design and testing to address specific business requirements. Over the years OS&B has expanded and acquired other companies in the plastic molding business

OS&B had a challenge of job scheduling, optimising their production line, meeting delivery timelines and eliminating paper-based processes. By implementing LYNQ and SYSPRO this was solved and process automation and efficient job scheduling was achieved!

Oakville Stamping & Bending have 90 employees on their shop floor in Ontario, Canada.

OS&B needed a way to summarise all the production requirements from various customers on a daily basis. By organising production for a particular SKU in one go they could more efficiently utilise capacity. Due to the small quantities, they leveraged several third-party tools with SYSPRO ERP and developed a custom application to automate processes.

As they grew, however, their order sizes increased, and their custom applications were no longer able to manage daily production requirements or account for the lead times they needed. They needed a solution flexible enough to allow them to customise business processes and efficiently utilise their work-centres.

“Today, we are at a stage where a single SKU could take up to two weeks to produce and our ‘Drive-thru’ systems didn’t manage that very well. While we have the flexibility to say how far the operator can overwrite the date, it still requires someone to manually review the order and plan for it to meet the ship date. With LYNQ MES and SYSPRO we will have the flexibility to properly schedule jobs and the ‘Drive-thru’ programme will be obsolete.”

Kevin Ernst, General Manager, OS&B

About LYNQ

Our product provides a plug and play manufacturing operations management software that helps drive continuous improvement for manufacturers. Our expertise and tailored approach ensure that our products match the specific needs of each business. With our user-friendly interface, our software is easy to work with and enjoyable to use. We are dedicated to helping our customers succeed by enhancing their manufacturing operations.

LYNQ offers manufacturers a comprehensive solution to effectively manage their manufacturing process. With the ability to Plan, Track, Automate, Analyse, and Optimise, manufacturers can streamline their operations and improve productivity. LYNQ’s advanced features and tools provide valuable insights and data-driven decision-making capabilities, empowering manufacturers to enhance efficiency and achieve optimal results.
