EXCELTA'S PRECISION TRANSFORMATION: SYSPRO AND LYNQ UNLEASH MANUFACTURING EXCELLENCE.

Excelta Corporation, est. in 1957 by Jerome Dalseme specialises in manufacturing small assembly hand tools such as tweezers, pliers and cutters from their facility in Buelton, California. These precision tools are distributed to industries including Military Electronics, Consumer Electronics, Medical Device Manufacturing, Electronic Assembly and Repair sectors. Excelta's product range has expanded, growing from a modest selection of chain nose pliers and tweezers to an extensive catalogue of over 1,200 items distributed to the consumer electronics market. Excelta has maintained a strong commitment to delivering top-quality, innovative solutions.

The Challenge

As they expanded, they realised that their dated ERP system no longer served their intricate production processes and reporting requirements. Hindered by complex production processes and limited reporting capabilities, proficient inventory management, accurate demand forecasting and the maintenance of optimal stock levels for timely goods availability were big challenges.

The Solution

Implementing and integrating SYSPRO ERP software and LYNQ's MES solution to drive operational excellence and boost productivity through robust reporting. Summarising the transformation in a few words...

“Since moving to SYSPRO integrated with LYNQ, we have made continual progress. It's just a well-rounded business solution.”

Daniel Graef, IT & Purchasing Manager,
Excelta Corporation

With unwavering dedication to automation, Excelta turned to SYSPRO integrated with LYNQ to drive efficiencies and reduce costs across their entire organisation.

Inventory and Supply Chain Revolution

SYSPRO integrated with LYNQ's automation capabilities redefined the inventory and supply chain process. It streamlined efficiency, bolstered supplier relationships and empowered informed decision-making.

Excelta accomplished improved inventory management, eradication of stockouts, and a notable decrease in holding expenses.

This enabled them to produce goods in the right quantity at the right time, cutting excess inventory costs and elevating operational efficiency and customer satisfaction.

Elevating Warehouse Management with LYNQ MES

Excelta embraced LYNQ's MES solution. It accurately tracks labour time, schedules over 24 work centres and offers valuable performance insights. The tracking extends beyond employees to encompass equipment, ensuring that operations are always equipped with up-to-date information.

Excelta Corporation's implementation of SYSPRO and LYNQ's world-class MES solution is a testament to the transformative power of technology. By adopting automation and innovative solutions, Excelta got rid of the limitations of their outdated ERP system. Today, they set the benchmark for precision manufacturing in the electronics, medical devices, aerospace and defence industries. Their journey serves as an inspiring example of how SYSPRO and LYNQ's technology can drive efficiency, reduce costs and stimulate progress in today's competitive business landscape.

“LYNQ MES is a great module to accurately track labour time, schedule our 24+ work centres and analyse performance, we are currently tracking both equipment and employee time to be able to keep operations informed with up-to-date information.”

Daniel Graef, IT & Purchasing Manager,
